FINAL REPORT

Patient Information		Submitter Information	
Patient Name:	Test, Bell	Group Name:	Generic Physician Practice
Patient DOB:	04/10/1966	Patient Age:	57 Years
Patient Sex:	F	Physician Name:	Test, Doc
Patient Code:	98746	Physician NPI:	1234567890
		Physician Fax:	123-456-7890

Molecular Report

COVID-19 Coronavirus (SARS-CoV-2)

Specimen Type: Nasopharyngeal (NP) Swab

<u>Target</u>	<u>Result</u>	<u>Reference Interval</u>
COVID-19 Coronavirus (Sars-CoV-2)	Positive	Negative

A negative result does not rule out the presence of PCR inhibitors in the patient specimen or assay-specific nucleic acid in concentrations below the level of detection by the assay.

A positive result is indicative of the presence of SARS-CoV-2 RNA. Due to the complexity of nucleic acid amplification methodologies, there may be a risk of false-positive results. Clinical correlation with patient history and other diagnostic information is necessary to determine patient infection status.

Reliable results are dependent on adequate specimen collection, transport, storage, and handling.

Mini-RPP Panel

Specimen Type: Bronchoalveolar (BAL)

<u>Target</u>	<u>Result</u>	<u>Reference Interval</u>
Influenza A	Negative	Negative
Influenza B	Negative	Negative
RSV	Negative	Negative

Negative results do not rule out the presence of PCR inhibitors in the patient specimen or assay specific nucleic acid in concentrations below the level of detection by the assay.
